

## Sid – End-to-End Secure Team Communication for Mobile and Desktop

*Beta release now available for iPhone, Android, Mac and Windows.*

**Berlin, Germany – 04/21/2016** - WhatsApp has just set a benchmark by introducing end-to-end encryption for private messaging, to everyone. But with the new focus on encrypting social conversations, the question arises why one would take considerably less care in how to conduct professional day to day team communication. Shouldn't be sending back and forth messages to colleagues or negotiating partners be handled with even greater care?

*Sid* allows you exactly that, and more - on your mobile and desktop device. The application was specifically developed to guarantee maximum data security for team communication. In contrast to storing everything in the cloud, *Sid* relies on end-to-end encryption in a decentralized network to ensure maximum data security for your business operation.

In this network, *Sid* merely supplies the connection between the devices while the actual data is shared with chosen users linked to each other over a peer-to-peer network. Data or chats over this network are only in the hands of those with permission and can not be read by anyone else.

*„The right to privacy has been bolstered by the recent implementation of end-to-end encryption in the field of instant messaging. It is a development which has been overlooked, when it comes to secure team communication. With Sid we are closing that gap.“* says Toine Diepstraten CTO of Spherebox UG.

Secure team communication is essential for journalists and lawyers who handle a great deal of sensitive information. But it is also important for everyone dealing with contracts, sales figures and balance sheets, pending patents or general information subject to protection of privacy, who should protect their data, by only transmitting over a secure network.

*Sid* also synchronizes with all of your connected devices. This way you can start a chat on your smartphone or tablet and finish it on your desktop computer without missing a thing!

Easy and simple team communication: Download *Sid* for free!
